Authorisation to Energieluitjes.nl regarding the registration of electricity in the Energy for Transport Register.

Definitions

- Energieluitjes.nl is included on the official NEa list of registration service providers. The platform automatically registers charging sessions in which energy is supplied for transport as Emission Reduction Units (ERE) with the Dutch Emissions Authority, sells these tradable certificates on behalf of the customer on the Dutch emission rights market and pays out the net proceeds annually.
- Customer means the private individual or company that has signed up through the Energieluitjes.nl platform, has read and accepted the authorisation and the terms and conditions, and has given Energieluitjes a mandate to register charging sessions on their behalf and to sell the resulting ERE certificates.
- Platform means the digital environment of Energieluitjes.nl, available via www.energieluitjes.nl and the associated app, with which the customer connects their charging station, follows charging sessions and views their earnings and payments.
- Calendar year means the period from 1 January up to and including 31 December. ERE recording, registration and payment are determined per calendar year. Per EAN code, only one registration service provider can be registered with the NEa per calendar year. Within a current calendar year, it is not possible to switch to another registration service provider for the same EAN code.
- The customer hereby grants Energieluitjes.nl power of attorney and permission to have the electricity consumption of the charging point(s) used and owned by the customer registered on the customer's behalf in the Energy for Transport Register of the Dutch Emissions Authority, hereinafter: "NEa". This authorisation is given for the purpose of the administrative processing of registrations of eligible electricity consumption within the statutory register designated for that purpose.

Article 1 - Scope of the authorisation

1. This authorisation relates to the electricity consumption charged for transport via the charging point(s) specified by the customer.
2. Users who sign up on the Energieluitjes.nl platform share data for the registration of EREs and for the performance of the mandate given to Energieluitjes.nl.
3. The authorisation is granted for at least one full calendar year, running from 1 January up to and including 31 December.

Article 2 - Performance of the registration

1. For the performance of the registration, the customer must provide Energieluitjes.nl in good time with all data, documents and evidence necessary for the assessment and processing of the electricity consumption, including the data relating to the connection, the charging point, the charging location and the amount of electricity charged.
2. Energieluitjes.nl assesses whether the data, documents and evidence provided by the customer meet the applicable statutory requirements and administrative conditions for registration in the Energy for Transport

Register (REV).

3. Only once the aforementioned requirements and conditions have been met can Energieluitjes.nl register the relevant amount of electricity in the Energy for Transport Register (REV) on behalf of the customer.
4. Within the limits of laws and regulations and on the basis of the information provided by the customer, Energieluitjes.nl will make reasonable efforts to ensure that the data and evidence supplied are suitable for registration.

Article 3 - Authorisation to Energieluitjes.nl

The customer authorises Energieluitjes.nl to perform on their behalf all acts reasonably necessary for the registration of the relevant electricity consumption in the Energy for Transport Register for the calendar year concerned.

Article 4 - Authorisation to the NEa

The customer gives the NEa permission to request and inspect the data in the Central Connection Register, as referred to in section 2.1 of the Electricity and Gas Information Code (Informatiecode Elektriciteit en Gas), relating to their connections. This concerns the data of the connection that the customer has specified in the authorisation to Energieluitjes.nl and that is relevant for the NEa to carry out its supervisory tasks under the renewable energy for transport scheme.

Article 5 - Authorisation to the verifier

The customer gives permission to the verifier engaged by Energieluitjes.nl to assess whether the charging point and the associated charging location meet the conditions for the registration of electricity under laws and regulations. This inspection and verification may take place remotely or on location, if and insofar as this is necessary for a correct assessment.

Article 6 - Consent to access charging data

1. The Customer declares that they are the rightful owner of the Charging Point and of the charging data generated by its use (the “Charging Data”), or that they are authorised to act on behalf of the rightful owner.
2. The Customer gives Energieluitjes.nl permission to collect, store and use the Charging Data to perform the Service, namely registering EREs and the related obligations towards the NEa. This concerns the session date, session ID, start and end time, kWh consumed/meter readings, Charging Point ID and, where necessary, card or user ID. Energieluitjes does not use the Charging Data for any other purpose and does not sell it to third parties.
3. Energieluitjes obtains the Charging Data because the OCPP communication of the Charging Point runs via a proxy of Energieluitjes. This proxy forwards the communication unchanged to the Customer's current backend and reads the Charging Data along the way. To this end, the OCPP configuration of the Charging Point is changed by the Customer or by Energieluitjes on the Customer's behalf. The Customer declares that they are aware of this method and expressly consent to it.
4. The Customer is aware that the supplier, manufacturer or operator of the Charging Point may, in its terms and conditions, restrict changes to the configuration or the sharing of Charging Data, and that this party may object. The Customer checks for themselves whether their agreement with that party prevents this consent. Energieluitjes supports the Customer in restoring the original configuration if needed.
5. Insofar as the Charging Data contains personal data, Energieluitjes processes it in accordance with the privacy statement. The Customer declares that they have informed the users of the Charging Point, where necessary.
6. The Customer may withdraw this consent at any time by notifying Energieluitjes.nl in writing. Energieluitjes then stops collecting Charging Data and, on request, restores the configuration of the Charging Point within 5

working days. Energieluitjes keeps Charging Data already collected only for as long as necessary for the statutory obligations relating to ERE registration.

Article 7 - Exclusivity and exclusion of double registrations

1. The customer declares and guarantees that, during the term of this authorisation, no other party will be authorised to arrange registration in the Energy for Transport Register for the same connection and with regard to the same electricity consumption.
2. The customer further declares that they will not provide any consumption data, metering data or related information regarding the same electricity consumption to third parties with the purpose, or the reasonably foreseeable consequence, that this same consumption is or can be entered elsewhere in the Energy for Transport Register.
3. The customer guarantees to Energieluitjes.nl that there will be no double registration of the same electricity consumption.
4. Should any direct or indirect costs arise as a result of actions by the customer as described in articles 7.1 to 7.3, the customer is responsible for them.

Article 8 - Conditions for processing and any compensation

1. The customer guarantees the accuracy, completeness and timeliness of all data and documents supplied.
2. Energieluitjes.nl is not obliged to register if, in its opinion, the data or evidence supplied are insufficient, incorrect, incomplete or unverifiable, or otherwise do not meet the applicable current conditions set by the NEa.
3. As long as the assessment referred to in the previous paragraph has not been completed, there is no entitlement to processing of the registration, nor to any compensation linked to the registration.

Article 9 - Term and renewal

1. This authorisation takes effect at the moment the customer agrees to its content.
2. The authorisation applies for at least one full calendar year, from 1 January up to and including 31 December, starting in the calendar year in which the authorisation was given by the customer, unless stated otherwise.
3. Renewal is possible per calendar year.
4. The customer may cancel at any time with a notice period of 1 month. Cancellations received by Energieluitjes.nl no later than 30 November prevent the mandate from being tacitly renewed for the following calendar year.
5. After cancellation, Energieluitjes.nl remains the registration service provider for the EAN code registered with Energieluitjes.nl for the rest of the current calendar year. All kWh measured within that year are registered with the NEa, sold and paid out net to the customer by Energieluitjes.nl, subject to the service fee applicable at the time of registration.
